Infographic- Types Of Codes

September 14, 2023

TYPES OF CODES

1

Binary Code:

This is the most basic type of code, using only two symbols, typically 0 and 1, to represent information. It is widely used in computing and digital communication.

2

Decimal Code:

This code uses decimal digits (0-9) to represent information. It is commonly used in everyday numbering systems.

3

4

Gray Code

Gray code is a binary numeral system where two successive values differ in only one bit. It is often used in rotary encoders and digital communication.

Barcodes:

Barcodes are graphical representations of data that can be scanned by a barcode reader. They are widely used in retail for product identification and inventory management

5

QR Codes:

QR (Quick Response) codes are two-dimensional barcodes that can store a variety of data types, including URLs, text, and contact information. They are commonly used for mobile payments and marketing.
